

My name is Andrew Feng. Since the beginning of high school, I have dedicated my time towards three main areas of activities: Community volunteering, Academics, and Sports. As the President of my school's Food for Thought club, I helped work towards a more sustainable way of providing members of Vancouver's homeless community with resources and support. I organized multiple school fundraisers to help raise money for the homeless.

Starting from grade nine, I have served as a Grade Rep, Executive, and finally as Co-President in my current grade twelve year on Student Council at Sir Winston Churchill Secondary school, the largest public school in Vancouver. I have helped organize and put into action numerous events for both my school

and the greater Vancouver community. Through our annual student engaging events, we created a stronger sense of community and a positive environment in our school, especially for the younger grades. In addition, we also hold a fundraiser during the winter months to collect food and money for our local food bank. Another aspect of my community leadership is my involvement in Track and Field. As the Vancouver City hurdle champion for three consecutive years, I am also the student coach assistant for the Sir Winston Churchill Track and Field team. I teach younger students how to hurdle. With my training, these individuals have become more courageous facing obstacles.

In terms of academics, I have been a part of every single advanced mini school program at my high school since my entry. I was in the Synergy program from grade eight to nine, the Prelude program in grade 10, and the Churchill International Baccalaureate program which is considered to be one of the best university prep schools in British Columbia from grade eleven to now. In grade eight and ten, I have won the Vancouver District Science Fair, and the admission to the Regional Science Fairs hosted at UBC. Following my experience at Science Fair, I made three editions of "Churchill Science Fair Book". These books comprise of all the projects from students at my school who have made it to the District and Regional Science Fairs for the purpose of being a reference source for individuals participating in science fair in future years.

Finally for sports, I have been running Track and Field since grade eight. I specialize in the 100 and 110 meter hurdles. I have represented my high school as well as the Vancouver Thunderbirds at numerous meets. Since grade eight, I have been the Vancouver City Champion 3 times, and have placed 5th in BC during the 2017 BC Jamboree Championship.

For Post-Secondary Institutions, I have been accepted by both UBC and UofT for General Sciences, I plan on going to UBC. I plan on pursuing a career in Medicine as I will be able to continue my passion for helping others.
